magic³ INTERMITTENT CATHETER

with m³ technology

Magic³ catheters are the first intermittent catheters designed from a unique composite of three distinct all-silicone layers. Each layer independently addresses an attribute required for comfortable, easy, and reliable intermittent catheterization.

The all-silicone design also eliminates allergen, toxin or disposal concerns that may be associated with latex and PVC catheters.

Ultra-soft outer layer to maximize comfort

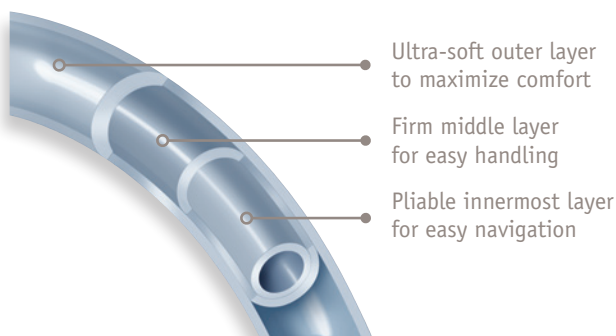

- The gentle outer layer is soft silicone with a nano-smooth surface. It provides reduced trauma and maximized comfort at the critical interface between the catheter and sensitive urethral tissue.

Firm middle layer for easy handling

- The middle layer of proprietary silicone gives the catheter a precise level of firmness for quick, simple insertion. It makes the catheter easy to handle without sacrificing the comfort provided by the ultra-soft outer layer.

Pliable innermost layer for easy navigation

- The soft innermost layer is made with an especially pliable silicone, that helps assure the catheter can navigate the urethra without unnecessary force. Additionally, this layer resists kinking and leverages the hydrophobic characteristics of silicone for efficient, reliable drainage.

magic³

The all-silicone Magic³ catheter delivers superior performance, easy handling, and unsurpassed comfort and convenience.

Simple and Effective

- FemSoft is a small, single-use product, available by prescription and currently the only urethral insert for sale in the U.S. Once you insert FemSoft into your urethra, it gives you immediate control over unwanted urine loss, odor, and wetness—without surgery or medication. A long-term FemSoft study showed that 93% of women were completely dry when using FemSoft, and 95% said they would recommend it to a friend.

Soft and Gentle

- FemSoft consists of a narrow silicone tube that's encased in a soft, pliable, mineral oil-filled sleeve. To protect delicate tissue, the FemSoft Insert is smooth and seamless, with no hard surfaces. The insert conforms to your body, creating such a comfortable fit that users report hardly knowing it's there.

MALE EXTERNAL CATHETERS

Rochester Medical’s advanced catheter designs are helping men improve their quality of life. Innovative materials, improved adhesives, and new product configurations make external catheters a comfortable reliable continence care choice. Our broad line of silicone male external catheters offer security and peace of mind for many men. Our variety of design configurations and sizes ensures men, including those who were previously hard to fit, will find an option that fits well and stays securely in place.

Rochester Medical Male External Catheters Provide

- Superior breathability for enhanced comfort and optimal skin integrity
- Soft silicone and uniform adhesive for secure placement
- Clear sheath for easy visual inspection of skin
- Kink-resistant design to ensure continuous urine flow

SPiRiT™

HYDROCOLLOID ADHESIVE SHEATH

Combines adhesive and moisture-wicking properties of hydrocolloid with the breathability and flexibility of silicone.

Style 1

Offers built-in adhesive in a length and placement found with traditional male external catheters. The soft, breathable sheath conforms to the skin.

Size	CE	30/Box REF	100/Box REF
Small	25mm	35301	35101
Medium	29mm	35302	35102
Intermediate	32mm	35303	35103
Large	36mm	35304	35104
X-Large	41mm	35305	35105

Style 2

Combines forward adhesive technology with a 1.5” sheath. The maximum adhesive area on a short sheath provides men with a catheter for their specific needs.

Size	CE	30/Box REF	100/Box REF
